

Future Ready AI High School Pilot

A 4-6 week pilot designed to build educator confidence, student AI literacy, responsible-use practices, and career-connected learning.

Executive Summary

This proposal outlines a flexible, evidence-informed pilot for introducing responsible AI literacy in a high school setting. The pilot can begin with one teacher team, one department, or a small interdisciplinary cohort. It combines educator preparation, classroom-ready curriculum, implementation support, and evaluation so district leaders can learn before scaling.

Pilot at a Glance

Duration	Participants	Student Focus	Primary Outcome
4-6 weeks	2-4 educators or one department/team	Grades 9-12	Evidence-based recommendation for next steps

Pilot Purpose and Goals

- Assess the district's current readiness, priorities, and implementation constraints.
- Build educator confidence with responsible AI concepts and practical classroom applications.
- Provide students with structured learning in accuracy, bias, privacy, fairness, transparency, and human oversight.
- Connect AI literacy to academic subjects, CTE pathways, and career readiness.
- Gather student work, educator feedback, and implementation evidence to inform future decisions.

Four-Phase Pilot Model

Phase 1

Discover

- Conduct a brief readiness assessment.
- Gather stakeholder input and identify the pilot context.
- Review current guidance, approved tools, curriculum priorities, and constraints.
- Confirm participants, schedule, success measures, and communication plan.

Key deliverable: Readiness summary and pilot design brief

Phase 2

Prepare

- Deliver introductory professional learning for participating educators.
- Customize lesson materials to the selected subject, department, or pathway.
- Clarify responsible-use expectations, privacy considerations, and facilitation guidance.
- Prepare implementation tools, student materials, and feedback instruments.

Key deliverable: Educator preparation session and customized implementation package

Phase 3

Implement

- Facilitate or support classroom delivery of selected AI literacy lessons.
- Provide coaching, troubleshooting, and implementation support.
- Collect student work, observations, and educator reflections.
- Document adaptations, questions, and emerging needs.

Key deliverable: Student learning experiences and implementation support

Phase 4

Evaluate

- Review student work and evidence of learning.
- Gather educator and, where appropriate, student feedback.
- Assess implementation strengths, barriers, and readiness for expansion.
- Provide recommendations for next steps, refinement, or scaling.

Key deliverable: Pilot findings and recommendations report

Illustrative Pilot Scope

Final scope should be customized after discovery. The following elements provide a practical starting point.

Possible Student Learning Experiences • Who Is Responsible When AI Makes a Decision? - flagship case-based lesson • Evaluating AI-generated information for accuracy and evidence • Bias, fairness, and missing context in automated systems • Privacy, responsible use, and academic integrity • Career-connected application or CTE extension	Possible Educator Support • Introductory AI literacy and responsible-use workshop • Lesson walkthrough and facilitation preparation • Curriculum customization by subject or pathway • Implementation coaching and troubleshooting • Reflection session and recommendations
--	--

Pilot Deliverables

Readiness and needs summary	A concise overview of the starting context, priorities, risks, and opportunities.
Customized pilot plan	Participants, timeline, learning experiences, roles, measures, and communications.
Educator preparation resources	Professional learning materials, lesson guidance, and implementation tools.
Classroom-ready student materials	Selected lessons, student worksheets, evidence cards, decision tools, and assessments.
Implementation support	Coaching, check-ins, troubleshooting, and adaptation support.
Pilot findings report	Evidence, feedback, lessons learned, and recommended next steps.

Measures of Success

Success measures should be finalized with district stakeholders. Illustrative measures include:

Educator Readiness Increased confidence, clarity, and ability to facilitate responsible AI learning.	Student Learning Evidence that students can evaluate outputs, identify risks, and apply human judgment.	Implementation Quality Clear guidance, feasible lesson delivery, and documented adaptations.
Responsible Use Improved understanding of privacy, fairness, transparency, and accountability.	Career Relevance Connections to academic subjects, CTE pathways, and workplace expectations.	Decision Readiness Actionable evidence and recommendations for continuation, refinement, or scaling.

Roles and Responsibilities

Future Ready AI	District / School Partner
- Facilitate discovery and pilot planning. - Provide professional learning and curriculum materials. - Customize implementation resources. - Provide coaching and evaluation support. - Deliver findings and recommendations.	- Identify participants and a primary contact. - Confirm approved tools, policies, and requirements. - Coordinate scheduling and access. - Support educator participation and communication. - Review evidence and determine next steps.

Recommended Next Step

Schedule a short planning conversation with the appropriate district and school stakeholders to confirm the pilot audience, priority outcomes, approval requirements, timeline, and desired evidence.

Pricing and final scope would be developed only after the discovery conversation.
