

Pitch the Idea and Its Limits

GRADES
9-12

Connect the need, the value, and the next test.

01 / DISCOVER

Find evidence of a need.

02 / DEVELOP

Plan value and delivery.

03 / TEST

Challenge your assumptions.

SIX-LESSON PATHWAY / DISCOVERY TO PITCH

Public lesson sample | Fictional practice evidence | No student AI account required | Curated public sample; fictional materials. No student AI account required.

AI ENTREPRENEURSHIP | CURATED SAMPLE / LOOK + DISCUSS

Pitch the Idea and Its Limits

GRADES
9-12

Show evidence, value, a viable delivery plan, risks, and a testable next step.

An idea becomes stronger when you test it.

DISCOVER

What do people actually need?

MODEL

How will you deliver useful value?

TEST

What is still an assumption?

YOUR GOAL

Pitch a useful idea while explaining its limits, costs, risks, and next test.

Your team proposes an event-summary service. Its paper prototype is ready. Customer demand, time savings, costs, and willingness to pay have not been established.

Fictional discovery notes

USER

"I sometimes miss the room or time in long notices."

ORGANIZER

"Details change, and corrections take effort."

PARTNER

"A reusable template might already solve much of this."

What is supported? What is an assumption? What must you learn next?

LESSONS 1-3 | EVIDENCE + AI FIT / DISCOVER + DECIDE

Pitch the Idea and Its Limits

Investigate a need, compare options, and define a limited AI role.

Worth-Solving Scorecard: compare two candidate problems. Rate evidence, impact, frequency, access to people, and feasible scope from 1-4. Explain ratings; a total is not proof.

Candidates, ratings, evidence, and selected problem:

AI Fit Test: mark YES / NO / UNSURE and explain

Is there a specific task for AI?	Y / N / ?
Does it use patterns, prediction, recommendation, classification, or generation?	Y / N / ?
Is lawful, appropriate information available?	Y / N / ?
Would software, a checklist, search, or a human service work better?	Y / N / ?
Can important outputs be verified before action?	Y / N / ?
Can a person review, override, and explain the result?	Y / N / ?
Is the benefit proportionate to the risk and resources?	Y / N / ?

Role map: input / AI task / output / verification / human decision

What must AI never do alone? What is the non-AI fallback?

AI Entrepreneurship | Original scorecard criteria and seven AI Fit questions | Curated public sample; fictional materials. No student AI account required.

LESSON 4 | VALUE + DELIVERY MODEL / EXPLAIN VALUE

Pitch the Idea and Its Limits

Separate a proposed benefit from a verified result.

Value proposition: For [people] with [need], our [solution] helps [benefit] by [how], unlike [current alternative]. Test whether it is clear, credible, and compelling.

Draft value proposition + one peer revision:

Problem	Which verified need are you addressing?

Customers / users / beneficiaries	Who uses, decides, pays, benefits, or may be affected?

Value proposition	What meaningful outcome is proposed? What supports it?

Solution + AI role	How does it work? What limited task does AI support?

Channels + engagement	How will people discover, access, and use it?

Partners + resources	What people, tools, permissions, and relationships are required?

Costs / sustainability / success	What costs and support must be tested? How will success be measured?

Untested claim to disclose + evidence needed to test it:

AI Entrepreneurship | Value proposition and business/community model sample | Curated public sample; fictional materials. No student AI account required.

LESSON 5 | RESPONSIBLE INNOVATION / REVIEW RISKS

Pitch the Idea and Its Limits

GRADES
9-12

Assess likelihood and severity. A low score does not remove responsibility.

For each risk: likelihood (L) 1-4 x severity (S) 1-4 = priority. Record a safeguard, owner, and condition to pause. Use another sheet for a complete risk register.

Purpose / necessity

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Privacy / data

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Bias / fairness

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Access / inclusion

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Accuracy / transparency

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Harm / misuse

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Human accountability

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Appeal / remedy

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Monitoring / stop rules

L: ___ S: ___ Priority: ___ Safeguard / owner: _____

Highest remaining risk: affected people, missing evidence, and required action

LESSON 6 | PROTOTYPE + PITCH / PRESENT + TEST

Pitch the Idea and Its Limits

GRADES
9-12

Present an eight-part pitch. Make a specific, evidence-based request for a next test.

Prototype plan: type; what it demonstrates; materials; who tests; what to observe. Record one strength, confusion, question, and revision. Use paper, slides, a storyboard, or role-play.

1 / Solution + teamName, one-sentence promise, and team.
_____**2 / Problem worth solving**People, context, impact, and evidence.
_____**3 / Discovery**Current practice, needs, constraints, and insight.
_____**4 / Solution + AI role**Experience, limited task, and alternative considered.
_____**5 / Value proposition**Benefit, differentiation, and reason to trust.
_____**6 / Business/community model**Delivery, partners, costs, sustainability, and success.
_____**7 / Responsible innovation**Top risks, safeguards, owner, appeal, and fallback.
_____**8 / Prototype + next test**Demonstration, feedback, revision, and specific ask.
_____**Pilot plan: measure / success criterion / reviewer / stop rule**
_____**Reflection: What changed? Which benefit is still unproven?**
