

Defend a Responsible Prototype

GRADES
9-12

Show the evidence. Set the limits. Plan the test.

01 / DEFINE

Ground the need in evidence.

02 / DESIGN

Build in human review.

03 / DEFEND

Explain limits and next steps.

WEEKS 7-9 / RESPONSIBLE PROTOTYPING

Public lesson sample | Fictional practice evidence | No student AI account required | Curated public sample; fictional materials. No student AI account required.

WEEKS 7-9 | CAPSTONE SAMPLE / LOOK + DISCUSS

Defend a Responsible Prototype

GRADES
9-12

Justify the need, the AI role, human authority, safeguards, and a next test.

Build a case for a responsible solution.

EVIDENCE

Whose need are you solving?

DESIGN

Where does human review belong?

DECISION

What should happen before a pilot?

YOUR GOAL

Defend a prototype using evidence, safeguards, human authority, and a next test.

A fictional community group needs clearer event information. Your team must compare an AI-assisted summary with a standard template, a staffed help point, a process change, and no intervention.

Stakeholder evidence: small practice set

USER NOTE

"Long notices make it hard to find the time and place."

ADVISER NOTE

"Event details can change. Someone must check every draft."

ACCESS NOTE

"A phone-only solution will not reach everyone."

These three notes suggest a need. They do not prove its frequency, represent every stakeholder, or establish that AI is the best solution.

WEEK 7 | PROBLEM DISCOVERY + AI FIT / DEFINE + COMPARE

Defend a Responsible Prototype

Ground the problem in evidence before choosing technology.

Primary users	Who uses the information? What evidence describes the need? _____
People affected	Who could be helped, harmed, or inconvenienced? _____
Decision-makers	Who approves content, tools, and the next test? _____
People with expertise	Whose knowledge is needed to verify facts and access? _____
People possibly excluded	Whose language, disability, device, or support needs are missing? _____

Problem: [Stakeholder] needs [need] because [evidence], respecting [constraint].

AI fit: compare options and explain your reasoning

AI / ordinary software	Which specific task benefits from AI? What could a template do? _____
Process / no intervention	Would changing the notice or offering help meet the need? _____
Decision / evidence gap	Choose an option. What evidence could change your decision? _____

WEEK 8 | ROLE MAP + RISK REGISTER / DESIGN + CONTROL

Defend a Responsible Prototype

GRADES
9-12

A prototype tests an idea. It does not prove readiness or effectiveness.

AI role map: define the boundaries

Input

Only approved event facts; specify the minimum necessary data.

AI task / output

What limited task produces what reviewable draft?

Verification

How will every important fact and access requirement be checked?

Human authority

Who can approve, revise, reject, or override the result?

Fallback / correction

What non-AI route works? How can someone get a correction?

Risk register: name a risk, safeguard, owner, and stop rule

Privacy / data

Risk / safeguard / owner / condition to pause:

Accuracy / disclosure

Risk / safeguard / owner / condition to pause:

Fairness / access

Risk / safeguard / owner / condition to pause:

Prototype: sketch input, draft, review, and final action. Show one limitation.

WEEK 9 | PITCH + REFLECTION / PRESENT + REFLECT

Defend a Responsible Prototype

GRADES
9-12

Defend why your solution should be trusted and when it should not be used.

Portfolio check: problem evidence; stakeholder map; AI fit; role map; risk register; prototype; sources and AI-use disclosure; individual reflection.

1 / Need

Who has the problem? What evidence supports it?

2 / Alternatives + AI fit

Why this approach? Why not a simpler option?

3 / Solution + prototype

Explain the workflow from input to human action.

4 / Risks + safeguards

Address privacy, accuracy, fairness, access, and misuse.

5 / Authority + remedy

Who decides and overrides? How can people question or correct harm?

6 / Limits + next test

What is unproven? What would justify a limited pilot?

Reflection: How did your reasoning change? What is your next learning step?

Next-test decision: GO / REVISE / STOP. What evidence would change it?
