AI EXPLORERS | GRADES 6–8 | RESPONSIBLE AI & DIGITAL SYSTEMS LAB

Student Mission Workbook

Analyze • Audit • Verify • Evaluate • Design

Eight missions. Real evidence. Your decisions.

Grades 6–8 • Eight-Week Responsible AI Portfolio • Student-facing workbook

In this lab you are an **investigator, analyst and designer**. You will open up AI-supported systems, test claims, protect people's data, spot unfair results and design something responsible. You do **not** need an AI account to do any of it.

MEET YOUR CAREER AMBASSADORS

Healthcare

Construction & Skilled Trades

Technology & Cybersecurity

Drone / UAS & Aerial Data

Business & Entrepreneurship

Education & Creative Media

Investigator name or classroom code	

Before you begin: Complete only the pages assigned by your teacher. Use fictional or teacher-approved information and follow the classroom responsible-use agreement.

HOW THIS WORKBOOK WORKS

Know Your Mission Features

Watch for these labels. Not every mission uses every one.

YOUR MISSION The case you are investigating.	**QUICK PICK** Predict or vote before you see more evidence.
CLUE / EVIDENCE CARD Information to inspect, sort and rate.	**AI DETECTIVE** A puzzle that tests a tricky idea.
PLOT TWIST New evidence drops. Does your answer change?	**AI VOCABULARY UNLOCKED** Professional words you just used.
HUMAN CHECKPOINT Stop and ask before you trust or share.	**YOUR CALL** You make the human decision—and explain it.
CAREER AMBASSADOR How real professionals use this skill.	**LEVEL UP** An optional challenge for extra power.
EXIT TICKET Show what you learned and what you still wonder.	

BEFORE YOU SUBMIT ANY PAGE

- ☐ Remove names and personal details.
- ☐ Cite or name the source of important claims.
- ☐ Disclose meaningful AI assistance if your teacher approved its use.

My name or classroom code

One question I have about AI-supported systems

I wonder… / I want to find out…

THE CLUE SORT

Trace the Suggestion

Each clue card is one piece of the playlist system. **Check where it belongs.** Watch out: some clues are things the app **does not have** at all.

A student wants music that helps them focus.	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
Songs the student played over the last month	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
Songs skipped after a few seconds	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
Songs marked with a heart (liked)	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
How tired or stressed the student feels today	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
A 25-song “Study Mode” playlist appears.	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
The student chooses to play it, skip songs or switch playlists.	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data
Whether song lyrics distract this student	☐ Goal ☐ Input ☐ Output ☐ Human decision ☐ Not in the data

BUILD IT

Map the System

Use words, a sketch or both. Follow the arrows from left to right.

USER / GOAL →	INPUTS →	PATTERN OR RULE →	OUTPUT →	HUMAN DECISION
Who uses it? What do they want?	*What information goes in?*	*How does it turn inputs into a suggestion?*	*What comes out?*	*Who decides what happens next?*

LIMIT / ERROR

What can the app not know? Where could it get things wrong? (Hint: what could a skip really mean?)
